
PLUOTS

- ◆ Pluots are also called DINOSAUR EGGS because of the speckled skin some varieties have. They are a cross between a plum and an apricot, but are sweeter than either.
- ◆ This is a very young fruit! Pluots were just introduced in grocery stores in the 1989.
- ◆ They were invented by a biologist, Floyd Zaiger.
- ◆ FANCY CROSS POLLINATION! An eye shadow brush is used to take pollen of a flower on one tree and put it on the flower of another tree (no bees needed for this pollinating job!)
- ◆ There are over 20 varieties of pluots, some with very unusual names, like: Last Chance, Flavor Grenade, Flavor Prince, Flavor King, Flavor Queen, and Candy Stripe
